Professional Summary

Full Stack Engineer with 1.5+ years shipping AI-driven applications across Fintech, HR Tech, and On-Demand platforms. Built production systems using NestJS, FastAPI, React, and PostgreSQL — specializing in LLM integrations, RAG pipelines, and third-party API orchestration (CIBIL, Razorpay, Signzy). Proven track record delivering scalable features in Agile teams.

Technical Skills

Languages: Python, TypeScript, JavaScript (ES6+), SQL, Java

Backend: NestJS, FastAPI, Node.js, Express, REST APIs, Microservices, JWT Auth, WebSockets, Async Workers, Rate Limiting, OpenAPI, Multi-Tenancy Patterns

Frontend: React 18, Redux, TypeScript, Vite, TailwindCSS, Bootstrap, Responsive Design

AI/ML: LLM Integration (Groq LLaMA3, OpenAI GPT-4), RAG Pipelines, LangChain, Embeddings, pgvector, Prompt Engineering

Databases: PostgreSQL, Prisma ORM, MongoDB, Redis, pgvector, Query Optimization, Indexing

DevOps: AWS S3, Docker, CI/CD (GitHub Actions), Linux, Unit Testing, Code Review, Agile/Scrum

Fintech APIs: Signzy, DigiLocker, CIBIL, Equifax, CRIF, Razorpay, Easebuzz, Account Aggregator, Penny Drop

Experience

Full Stack Engineer — 8byte.ai, Hyderabad

Mar 2026 – Present

- Built EMI calculation + Easebuzz payment integration for multi-tenant LOS, reducing manual payment processing time by 60%.
- Shipped Reloan workflow enabling 200+ fully repaid customers to reapply in first 2 months of deployment.
- Integrated Signzy Email Domain API with PostgreSQL caching, eliminating 90% redundant API calls via composite indexing.
- Migrated 15GB+ Account Aggregator data from PostgreSQL to AWS S3 in batches of 50, reducing database storage costs by 40%.
- Designed workflow analytics tracking 10+ KYC steps (PAN → Aadhaar → Liveness → Income Proof), enabling product team to identify 25% drop-off at Bank Verification step.
- Extended V2 UI architecture for 2 onboarding flows, refactoring 700+ lines while preserving backward compatibility for 5 existing brands.
- Implemented FOIR enforcement in CAM Calculator, blocking 15+ non-compliant loan approvals in first month of deployment.

Full Stack Developer — Cognitbotz, Hyderabad

Feb 2025 – Feb 2026

- Built FastAPI microservices for enterprise ATS processing 500+ resumes/day with 95% uptime across 6-month period.
- Developed semantic matching pipeline using Sentence Transformers + pgvector, achieving sub-second query latency for 200+ candidate pools.
- Reduced resume evaluation latency from 12s to 2.5s by implementing async background workers handling 50+ concurrent requests.

- Integrated Groq LLaMA3 + OpenAI GPT-4 APIs with Pydantic validation, maintaining 99.2% structured output reliability across 10K+ API calls.
- Containerized 5 backend services with Docker + GitHub Actions CI/CD, cutting deployment time from 45min to 8min.

Frontend Developer (Intern) — Cognitbotz, Hyderabad

Oct 2024 – Feb 2025

- Built 15+ reusable React components with JWT authentication, contributing to 3 sprint releases.
- Optimized recruiter dashboard rendering 500+ candidate records, reducing load time from 4.2s to 1.1s via virtualization.

Projects

Loan Origination System (LOS) — Multi-Tenant Fintech Platform

8byte.ai

Tech Stack: React 18, TypeScript, Redux, NestJS, PostgreSQL, Prisma ORM, AWS S3, Docker, JWT

- Contributed to production LOS managing 1000+ loan applications/month across 3 portals (Customer, Partner, Admin).
- Worked within KYC workflow integrating 8 financial APIs (Signzy, DigiLocker, CIBIL, Razorpay, Penny Drop, AA framework).
- Extended multi-brand SaaS architecture supporting 4 independent brands with zero-code configuration.
- Shipped features across credit assessment (CAM Calculator, FOIR validation) and collections (payment gateways, Reloan workflows).

AI Resume-to-Portfolio Generator — AI SaaS Platform

Personal Project

Tech Stack: FastAPI, PostgreSQL, SQLAlchemy, JWT, Groq LLaMA3, React, TailwindCSS

- Architected end-to-end AI SaaS platform converting uploaded resumes (PDF/DOCX) into dynamically generated portfolio websites — processing 100+ resumes during beta testing phase with 200ms avg API response time.
- Engineered modular FastAPI backend with layered architecture (routers → services → schemas → models), structured resume parsing pipeline using Groq LLaMA3 with enforced JSON schema validation, and async inference workflows with error handling, logging, and rate limiting (10 req/min).
- Implemented PostgreSQL schema for user management (JWT-based auth), portfolio persistence, and content versioning — achieving 99% uptime during 2-week beta period with retry logic for transient LLM API failures.

SkillMatrix — AI-Powered Applicant Tracking System

Cognitbotz

Tech Stack: FastAPI, MongoDB, Sentence Transformers, pgvector, LLM APIs, Pydantic

- Built semantic resume-to-job-description matching engine using Sentence Transformer embeddings (all-MiniLM-L6-v2) and pgvector for approximate nearest neighbor search — ranking candidates from pools of 200+ resumes with sub-second query latency.
- Processed 50+ resumes in parallel using async background workers with exponential backoff retry logic for LLM API failures, achieving 98% processing success rate across 10K+ evaluations.
- Designed RAG-style evaluation workflows integrating LLM-based candidate scoring pipelines — extracted relevant experience via semantic search, passed context to GPT-4 for structured assessment, and validated JSON output with Pydantic schemas for fault-tolerant downstream consumption.

Real-Time Tracking Platform — On-Demand Services & Delivery

Cognitbotz

Tech Stack: Node.js, Express, Redis Pub/Sub, Socket.IO, MongoDB, React, JWT

- Built unified real-time tracking system for delivery agents and on-demand service providers (plumbers, electricians, cleaners) — architected GPS-based location streaming using Redis Pub/Sub and Socket.IO WebSockets, handling 100+ concurrent providers with sub-second broadcast latency.

- Designed MongoDB geospatial indexing for proximity-based matching, reducing "find nearest provider" query time to 150ms and enabling efficient customer-to-provider assignment.
- Implemented end-to-end booking workflow with real-time status updates (Requested → Assigned → En Route → In Progress → Completed), payment gateway integration, and WebSocket-based customer notifications.
- Optimized for high-frequency updates (1 location update/5 seconds per agent) using Redis channel isolation and MongoDB time-series collections.

Education

B.Tech in Information Technology — CVR College of Engineering (JNTU Hyderabad) 2019 – 2023
CGPA: 8.07 / 10 — Relevant Coursework: Data Structures, Algorithms, Database Systems, Web Development

Certifications

- Oracle Certified Associate (OCA) — Java SE 8 Programmer
- Google IT Support Professional Certificate — Google / Coursera
- Full Stack Web Development Certification — MyCaptain
- Database Foundations — Oracle Academy
